Subject Index of Volume 24

- Absorption
 - of CO₂ and H₂S in aqueous alkanolamine solutions using fixed-bed reactor with cocurrent downflow operation in pulsing flow regime, 163
 - countercurrent, of oxygen by frequency response technique, 93
 - mass transfer in liquid films during, 221
- Adsorption
 - of basic dyes on carbon, branched-pore model applied to, 1
 - of phenol and indole from aqueous solutions on activated carbons, kinetics of, 33
- Axial dispersion
 - in packed beds with fluid flow, 15
- Batch crystallizers
 - programmed cooling of, 217
- Binary vapour-liquid equilibrium
 - calculations for methyl chloride, dimethyl ether and methanol, 57
- Binary vapour mixture
 - flowing through moist granular bed, mass transfer between, 39
- Branched-pore model
 - applied to adsorption of basic dyes on carbon, 1
- Bubbling fluidized bed
 - model of gas flow above: prediction of splash zone height, 49
- Cocurrent downflow operation
 - in pulsing flow regime, absorption of CO₂ and H₂S in aqueous solutions using fixed-bed reactor with, 163
- Condensation
 - multicomponent, computational design method for, 189
- Cooling
 - programmed, of batch crystallizers, 217
- Countercurrent absorption
 - of oxygen by frequency response technique, 93
- Crystallizers
 - batch, programmed cooling of, 217
- Dispersion
 - axial, in packed beds with fluid flow, 15
- Distillation towers
 - three-phase, fast algorithm for, 133
- Ducts
 - elliptical, of arbitrary axis ratio, analytical and numerical studies of separated laminar two-phase flow in, 121
- Dust particles
 - in plate-type electrostatic precipitators, modelling of collection of, 105, 113
- Dyes
 - basic, on carbon, branched-pore model applied to adsorption of, 1
- Electrostatic precipitators
 - plate-type, modelling of collection of dust particles in, 105, 113
- Films
 - liquid, mass transfer in, during absorption, 221
- Fixed bed
 - of vanadium-titanium catalyst, new approach to oxidation of *o*-xylene in phthalic anhydride in, 157
- Fixed bed reactor(s)
 - absorption of CO₂ and H₂S in aqueous alkanolamine solutions using, with cocurrent downflow operation in pulsing flow regime, 163
 - assessment of role of thermally induced gas flow inhomogeneities in, 203
- Flow
 - separated laminar two-phase, in elliptical ducts of arbitrary axis ratio, analytical and numerical studies of, 121
- Fluidized bed
 - bubbling, model of gas flow above: prediction of splash zone height, 49
- Foam generation
 - in rotor-stator mixer, 145
- Free settling parameters
 - of spherical particles in power law fluids, determination of, 183
- Frequency response technique
 - countercurrent absorption of oxygen by, 93
- Fouling
 - calcium carbonate, in double pipe heat exchangers, influence of thermal boundary conditions on, 65
- Gas flow
 - above bubbling fluidized bed, model of: prediction of splash zone height, 49
- Granular bed
 - moist, mass transfer between, and binary vapour mixture flowing through it, 39
- Heat exchangers
 - double pipe, influence of thermal boundary conditions on calcium carbonate fouling in, 65
- Inhomogeneities
 - thermally induced gas flow, assessment of role of, in fixed bed reactors, 203
- Kinetics
 - of adsorption of phenol and indole from aqueous solutions on activated carbons, 33
- Mass transfer
 - in liquid films during absorption, 221
 - between moist granular bed and binary vapour mixture flowing through it, 39

Mixer

rotor—stator, foam generation in, 145

Multicomponent condensation

computational design method for, 189

'Multivir' method

application of, to separation of droplets and solid particles from gases, 211

Oxidation

of *o*-xylene into phthalic anhydride in fixed bed of vanadium—titanium catalyst, new approach to, 157

Packed beds

with fluid flow, axial dispersion in, 15

thermal conductivity of, 177

Power law fluids

determination of free settling parameters of spherical particles in, 183

Precipitators

plate-type electrostatic, modelling of collection of dust particles in, 105, 13

Pulsing flow regime

absorption of CO₂ and H₂S in aqueous alkanolamine solutions using fixed-bed reactor with cocurrent operation in, 163

Rotor—stator mixer

foam generation in, 145

Separation

of droplets and solid particles from gases, application of 'Multivir' method to, 211

Spherical particles

in power law fluids, determination of free settling parameters of, 183

Splash zone height

prediction of: model of gas flow above bubbling fluidized bed, 49

Ternary vapour—liquid equilibrium

calculations for methyl chloroide, dimethyl ether and methanol, 57

Thermal conductivity

of packed beds, 177

Vapour—liquid equilibrium

calculations of binary and ternary, for methyl chloride, dimethyl ether and methanol, 57

Vapour mixture

binary, flowing through moist granular bed, mass transfer between, 39
